

# Arresting Facts

## Fiberglass Filters vs. RP Paint Arrestors

Fiberglass filters tend to surface-load. This can cause clogging, which means reduced airflow. The result? Poor paint application, a poor working environment for the painter, and poor overspray collection performance.

RP Paint Arrestors are depth-loading with rear-to-front filtration action that provides better airflow, increased paint holding capacity and up to twice the life of fiberglass filters.

Because of their longer service life, you have less down time, which increases productivity. And you use fewer RP Paint Arrestor pads, reducing inventory and disposal needs. In addition, you may be able to reduce the filter area.

### Compare the Savings

	Fiberglass Filters	RP Paint Arrestors
Pads Required (20" x 20")	32	4'-4"
Changeout Interval	8 hrs.	16 hrs.
Product Cost / Pad / Shift	32 x 30 / \$9.60	12 x 70 / \$8.40
Labor Cost / Shift	\$5.00	\$2.50
Total Shift Cost	\$14.60	\$10.90

**You save \$3.70 or 25% per shift when you convert to RP Paint Arrestors! This does not include a minimum of 50% reduction in your disposal costs!**

Comparison based on an enclosed spray booth 8' high x 14' wide, 12,000 CFM exhaust, shift of 8 hours, and labor cost of \$10.00 / hr.

RP Paint Arrestors can help you arrest increasing production costs and down time. They are available in pads or rolls to suit any industrial finishing application. So contact us today for an in-plant demonstration. It won't take long to discover how easy and beneficial it is to convert to RP Paint Arrestors!
